ELECTRICAL CONDUCTIVITY OF GLASSES OF THE
 $\text{Li}_2\text{O}-\text{SiO}_2$ SYSTEM. Aug 60, 7p. 6 refs.
Order from LC or SLA ml\$1.80, ph\$1.80 60-18930

Trans. of *Zhurnal Fizicheskoy Khimii (USSR) 1959,
v. 33, no. 7, p. 1492-1494.

The electrical conductivity of eleven $\text{Li}_2\text{O}-\text{LiO}_2$ glasses was measured. The content of lithium oxide in the glasses varied from 7.9 to 42.57 mole %. Electrical conductivities varied from 10^{-11} to 10^{-11} mho/cm. The conductivity changes exponentially with the composition; the isotherms undergo a break in the composition range which corresponds to lithium disilicate. Industrial grades of high conductivity glasses can be developed from glasses of this system.
